Rough draft trans. of *Zhurnal Obshchey Khimii (USSR)
1958, v. 28, no. 10, p. 2706-2710.

The reactions of alkylation, acylation, benzoylation and
carboxy-methylation performed on 3-aminocarbazole
showed that there was a significant difference between
the amino group of 3-aminocarbazole and the amino
group of the ordinary aromatic amines. 3-Aminocarba-
zole, 3,6-diaminocarbazole, and especially 3-carbazyl
glycine possessed the tendency of transforming into the
corresponding quinodimines by oxidation. The com-
parison of the spectral curves in the ultra-violet region
